

Mobile application for searching for the nearest sexual partner

Zefir

Task

More and more people use services and apps for establishing connections and communicating today.

Differential features:

- you can make a confidential direct call to another user using VoIP technology
- this app should also include the most services that appear in the similar applications.

Solution

We developed iOS app and server application with following features:

-  Search for the nearest users using GPS as well as users from other close cities
-  "Who visited my profile" function
-  Calculation of compatibility with supposed partner taking into account common objectives and preferences
-  Paid services to advertise the profile
-  "User profile" that displays his/her look, preferences and interests
-  Private call to a user using VoIP
-  Public and private photo albums (private photos are available for selected users)
-  Profile for a couple
-  Messaging and chat
-  Photos rating
